

Natural Selection

Category	Game
Type	Steam release
Time to allocate (mins)	10
	Mark off a 1 square meter (or yard) section of grass. Scatter a selection of colored toothpicks in the marked off area – you will want to count the number of toothpicks of each color before you scatter them.
Instructions	<p>Provide a group of students with ~15 seconds to pick up as many toothpicks as they can find. Count and record the number of each color that was collected. Repeat this exercise several more times.</p> <p>After returning inside, Cubs can see which colors were found easier. You should find that the green toothpicks were found in smaller numbers, especially in the first rounds.</p>
